UPGRADED FEATURES FOR GREATER CONFIDENCE.

Original manufacturer nitrogen suspension compressors often fail when moisture enters the system or when the plastic piston wears out.

Dorman’s OE FIX nitrogen compressors feature aluminum pistons, improved seals and upgraded thermal classification.

On certain applications where the compressor is exposed to the elements, we go a step further, adding an aluminum housing that increases durability even more, giving you greater confidence in a lasting solution.

- **Aluminum piston** – more heat-resistant than factory plastic piston
- **Improved seals** – redesigned O-rings to prevent moisture intrusion
- **Greater thermal capacity** – higher thermal classification compressor to resist burn-out
- **Limited lifetime warranty**
